

FlameFast Gas Sensor

BACNET, MODBUS, 0-10V, VFC (24V AC/DC)

The Flamefast Gas Sensor is one of the most versatile gas sensors available on the market.

With an Analogue and Relay output, as well as a selectable BACnet or Modbus interface, FGS can connect directly into most third-party controllers or can easily connect to any of the Flamefast range of gas safety systems.

In a large proportion of modern buildings, the plant room safety systems are BMS integrated, and the FGS has been designed with this in mind. It can be treated like any other field sensor, the latching facility allows direct integration with the primary safety circuit, then simply pulse the Digital Input, or reset over the network once the alarm has cleared.
